My personal best practices

# S02-L03 My personal best practices

1. Store code in a git repository
2. Do not use "*select \**"
3. Separate attributes (columns) to rows
4. Set naming convention and don't allow exceptions
5. Be descriptive, don't use acronyms
6. Use audit columns
7. Batch delete & updates (example)
8. Reference the owner of an object
9. Table names always singular
10. Use "*WHERE 1=1*"
11. Old vs. new JOIN style
12. Prefix database objects
13. Don't use column rows in ORDER BY
14. Use LIMIT 1 as much as possible (example)
15. Use correct data type, it makes a difference

Note: Detailed code examples are in the attached .md / PDF file.
