Intro: Cursors & why to use them?

S09-L01 Intro: Cursors & why to use them?

```sql
-- Declare a new cursor for the dates
DECLARE cursor_dates CURSOR FOR
  SELECT `date`
  FROM `sample_staff`.`date`
  LIMIT 100;

-- Now open the cursor
OPEN cursor_dates;

-- Start the loop cycle
loop_users: LOOP

  -- Fetch the next row from the cursor
  FETCH cursor_dates INTO v_date;

END LOOP loop_users;

-- Close cursor when done
CLOSE cursor_dates;
```

Use a cursor to handle a result set inside a stored procedure.

Faster (already compiled).
